**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

# Office Action Summary

Application No.

10/529,411

Applicant(s)

ZHU, YANMIN

Examiner

Shin-Hon Chen

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 26 February 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-12 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 March 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date 3/29/05 and 9/8/05.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

1. Claims 1-12 have been examined.

#### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9, 11 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Dinsmore et al. U.S. Pat. No. 7043024 (hereinafter Dinsmore).

4. As per claim 1, Dinsmore discloses a method for key management and assignment for information encryption in a radio network system which include a root node, plurality of intermediate nodes in the root node and plurality of leaf nodes in each intermediate nodes of the radio network system providing Multimedia Broadcast or Multicast service, comprising the steps of: generating a group key for the root node which has plurality of intermediate nodes as child nodes (Dinsmore: column 1 lines 51-67); generating intermediate key using the group key for each of the intermediate nodes that owns both one parent node and one or more child nodes having its own intermediate key (Dinsmore: column 1 line 60 – column 2 line 7: hierarchy of keys); requesting a leaf node key in a user equipment (UE) for the service; and delivering a

Art Unit: 2131

private key as a leaf node key to the UE on a dedicate channel (Dinsmore: column 1 lines 15-23: secure unicast within multicast system).

5. As per claim 2, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein each user keeps node key information on all nodes that the node chain where he/she locates to the root node of the tree, including leaf node, intermediate nodes of respective layers and the root node (Dinsmore: column 2 lines 1-7).

6. As per claim 3, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein when a new user joins in the service, this user is connected to a node via its access parent node as a new leaf node and this user needs to obtain keys of all nodes including intermediate nodes and root nodes that are passed by the node chain from the access parent node to the root node; these node keys won't be updated due to the joining of the user; the transmissions of these node key are sent to the user sequentially in point-to-point mode and are encrypted by using the key of the new leaf node (Dinsmore: column 2 lines 1-19: prior to eviction).

7. As per claim 4, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein when a new user joins in the service, this user is connected to a node as a new leaf node via its access parent node and this user needs to obtain keys of all nodes including intermediate nodes and root nodes that are passed by the node chain from the access parent node to the root node; these node keys will be updated due to the joining of the user; for the newly-joined user,

Art Unit: 2131

the transmissions of these new nodes keys are sent to the user sequentially in point-to-point mode and are encrypted by using the key of the new leaf node (Dinsmore: column 2 line 54 – column 3 line 6).

8. As per claim 5, Dinsmore discloses the method of claim 4. Dinsmore further discloses wherein for each node that needs key update, new keys will be encrypted with old keys and will be delivered to the final leaf node's users that they belong to in point-to-multipoint broadcast mode (Dinsmore: column 2 lines 54-67).

9. As per claim 6, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein when a user leaves the service, a leaf node is disconnected from its parent node and the keys of all nodes that the node chain passes by from the disconnected node to the root node of the tree are sequentially updated (Dinsmore: figure 2: the node keys are updated).

10. As per claim 7, Dinsmore discloses the method of claim 6. Dinsmore further discloses wherein for each node that needs key update, the key update of node is performed only after key updates of all its child nodes finish (Dinsmore: column 2 lines 54-57: the update is performed from bottom towards up).

11. As per claim 8, Dinsmore discloses the method of claim 6. Dinsmore further discloses wherein for each node that needs key update, the new node keys are delivered to all child nodes

Art Unit: 2131

of it one by one in point-to-point mode and are encrypted with key of each child node

(Dinsmore: column 2 line 54- column 3 line 16 and figure 2).

12. As per claim 9, Dinsmore discloses the method of claim 8. Dinsmore further discloses wherein each child node still uses the corresponding node key to encrypt the new node key, and delivers the new node key to the final leaf node's users that they belong to in point-to-multipoint mode (Dinsmore: column 2 lines 54-62).

13. As per claim 11, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein the root node locates in the same logical network device as that intermediate node does (Dinsmore: column 1 line 15-31 and figure 2).

14. As per claim 12, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein said root node locates in the different logical network device from that intermediate node does (Dinsmore: column 1 line 15-31 and figure 2).

### ***Claim Rejections - 35 USC § 103***

15. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

16. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dinsmore.

17. As per claim 10, Dinsmore discloses the method of claim 1. Dinsmore discloses the multicast channel can be embodied in various forms such as wireless network, the public internet, a cable network, or a like (Dinsmore: column 1 lines 28-31). Dinsmore does not explicitly disclose the encryption process is accomplished by RNC. However, one with ordinary skill in the art understands that the wireless network includes radio network and radio network controller is essential for controlling communication flow in a radio network. Therefore, it would have been obvious to one having ordinary skill in the art to utilize RNC for secure communication within network.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shin-Hon Chen whose telephone number is (571) 272-3789. The examiner can normally be reached on Monday through Friday 8:30am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
